

James Brown
General Manager of Cygnet Bay Pearls and The Kimberley Marine Research Station

James Brown is the third generation of his family to manage the family pearl farm at Cygnet Bay.

He grew up on the farm, 200km north of Broome on the tip of the Dampier Peninsula and attended its humble public school of approximately 10 students.

He was sent away to attend boarding school in Perth for High School (where he learnt to tie shoe laces and his neck tie on the same day) and returned home in 2000 after completing a Marine Biology degree at James Cook University in Qld.

Over the last 15 years James has honed his expertise in every facet of the cultured pearling industry and today enjoys the challenge of diversifying and adapting the old family business to meet the industries challenges.
